DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- A. *the molecular target* – Applicants must elect one category of molecular targets, such as those listed in paragraph 0169 of the published application;
- B. *molecular target/target oligonucleotide association* – Applicants are required to select one species of association between the molecular target and the target oligonucleotide (e.g., see paragraph 0174 and 0175 in the published application);
- C. *the bifunctional complex* – Applicants are required to elect a single species of a bifunctional complex (e.g., phage);
- D. *the display molecule* - Applicants are required to elect a single species of a display molecule (e.g., polypeptide);
- E. *the two or more chemical entities used to produce the display molecule* - Applicants are required to elect a single species of the two or more chemical entities used to produce the display molecule as set forth in claim 2 (note: this species election should not conflict with any other species elections); and
- F. *the link between the display molecule and the identifier oligonucleotide* - Applicants are required to elect a single chemical species that joins the display molecule to the identifier oligonucleotide (e.g., claim 15).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. **The reply must also identify the claims readable on the elected species, including any claims subsequently added.** An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: each of the species are chemically and/or functionally distinct.

Time for Reply

Applicant is reminded that 1-month (not less than 30 days) shortened statutory period will be set for reply when a written requirement is made without an action on the merits. This period may be extended under the provisions of 37 CFR 1.136(a). Such action will not be an “action on the merits” for purposes of the second action final program. M.P.E.P. § 809.02(a).

Correction of Inventorship

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusions

If Applicants should amendment the claims, a complete and responsive reply will clearly identify where support can be found in the disclosure for each amendment. Applicants should point to the page and line numbers of the application corresponding to each amendment, and provide any statements that might help to identify support for the claimed invention (*e.g.*, if the amendment is not supported *in ipsius verbis*, clarification on the record may be helpful). Should Applicants present new claims, Applicants should clearly identify where support can be found in the disclosure.
